HIGHLIGHTS

- Assistant Professor Dr. He (Harry) Zhong at the JA Mulrennan Sr. Research Laboratory at Florida A & M University uses the WebEx WebOffice Database Manager to organize and store Abstracts on the non-target impact of pesticides, so research colleagues can quickly sort for scientific articles of interest.
- Dr. Zhong and his colleagues use WebEx WebOffice to hold online discussions about the West Nile Virus.
- WebEx WebOffice is used as a free-of-charge online registration site by mosquito control conference organizers.
- WebEx WebOffice is used to coordinate schedules for the research team at the JA Mulrennan Sr. Research Lab at Florida A & M University.

Customer Business Profile

The JA Mulrennan Sr. Research Lab at Florida A&M University conducts mosquito control research.

The Situation

Dr. He (Harry) Zhong, Assistant Professor at the JA Mulrennan Sr. Research Lab at Florida's A & M University, needed an easy way to share literature about mosquito control with colleagues at the university and elsewhere.

The Solution

Dr. Zhong used WebEx WebOffice to set up "Mosquito Control Online," a WebOffice for research colleagues. He uses WebOffice to host an extensive database of Abstracts related to pesticide non-target impact. The database can be searched by a variety of parameters and contains a listing for more than 1000 articles on subjects ranging from the "Effects of mosquito abatement pesticide treatments on honey bees" to the "Inhibition of acetylcholinesterase from different species by organophosphorus compounds, carbamates and methylsulphonyl fluoride."

In addition, Dr. Zhong uses WebEx WebOffice to conduct online discussions about the West Nile Virus. He also uses the WebOffice Calendar to coordinate the schedules of research team members, and to check on their availability for meetings.

Finally, he offers WebEx WebOffice as a free-of-charge online registration site for mosquito control conference organizers.

The Benefits

The WebEx WebOffice Abstracts Database can be easily sorted, allowing researchers to quickly find articles on topics of interest. Colleagues can search the database by author, date, short view and so on, and then email Dr. Zhong for a hardcopy of any article they want.

Dr. Zhong says, "It's very easy to set up the database with WebOffice. You can sort and group data by date, creator, region or any other field. You can create multiple views for everyone that uses the WebOffice."

Professor Zhong also uses his WebOffice to hold Discussion Forums about West Nile Virus. The Discussion Forums make it easy for everyone to add comments and read colleagues' comments at a convenient time. It can be accessed online and even keeps a permanent record of their remarks.

Finally, Dr. Zhong uses WebOffice to coordinate schedules for his research team at Florida A & M. The WebOffice Online Calendar allows him to efficiently check participants' availability before scheduling team meetings.
